[EBOOKS] Chapter 1 High Chromium Cast Irons Fr, 17 Aug 2018 14:17:00 GMT content equivalent. Stability of low alloy cast iron is due to large austenite (35%). Immersion test at -40 °C show the stability of ADI will improve. Addition of alloys varies the properties of cast iron leads to high cost. Alloy additions to be minimized to reduce the cost of casting (Reynaud. 2009: 53-55). (PDF) PRECIPITATION OF SECONDARY CARBIDES ON HIGH-CHROMIUM ... ### Products | Alloys | High Alloy Cast Irons

Fr, 21 Sep 2018 08:27:00 GMT High-chromium cast irons are resistant to oxidizing acids, particularly nitric acid and are useful for work with weak acids under oxidizing conditions with many organic acid solutions and with salt solution. When the chromium levels exceed 20% high-chromium cast irons exhibit good resistance to oxidizing acids, particularly nitric acid (HNO<sub>3</sub>).

### Chapter 1 Properties and Uses of Metal - NAVY BMR

Mi, 12 Sep 2018 13:17:00 GMT Iron alloyed with various proportions of carbon gives low-, mid- and high-carbon steels, and as the carbon levels increase, ductility and toughness decrease. The addition of silicon will produce cast irons, while the addition of chromium, nickel, and molybdenum to carbon steels (more than 10%) results in stainless steels.

### Module - NPTEL

Mo, 17 Sep 2018 08:32:00 GMT In general the types of cast iron are (a) grey cast iron and (b) white cast iron (c) malleable cast iron (d) spheroidal or nodular cast iron (e) austenitic cast iron (f) abrasion resistant cast iron. (a) Grey cast iron- Carbon here is mainly in the form of graphite. This type of cast iron is inexpensive and has high compressive strength.
